OBJECTIVE

Final-year B.Tech Computer Science & Engineering student (CGPA 8.8, Dean's List, Top 10%) seeking the Technical Intern role at Quicket Solutions. Strong foundation in Java, Python, JavaScript, object-oriented programming, SQL/relational databases, and the software development lifecycle (SDLC), with hands-on experience building, testing, and deploying full-stack web applications.

SKILLS

Programming Languages: Java, Python, JavaScript (ES6+)

Core CS Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, Software Development Lifecycle (SDLC), System Design

Databases: SQL, MySQL, MongoDB (Mongoose ODM), Redis

Web Technologies: HTML5, CSS3, React.js, Node.js, Express.js, REST APIs, Tailwind CSS

Tools & Platforms: Git, GitHub, Docker, Postman, VS Code, Vercel, Render

Practices: Code Reviews, Debugging, Technical Documentation, Testing & Deployment

Soft Skills: Communication, Teamwork, Analytical & Problem Solving, Adaptability, Collaboration

PROJECTS

Food Donation Platform

Jul 2025 – Present

- Developed a full-stack food donation application using MongoDB, Express.js, React.js, and Node.js (MERN) to connect donors and volunteers.
- Wrote clean, well-documented, object-oriented backend code; implemented RBAC with JWT & bcrypt and Redis caching, cutting API response time by ~40% under concurrent load.
- Designed 10+ RESTful APIs and SQL/MongoDB schemas (MVC) with pagination, filtering, and error handling; containerized with Docker for consistent testing and deployment.

Real-Time Chat Application

Jun 2025 – Jul 2025

- Built an interactive chat platform with instant messaging, group chats, and live typing indicators using Socket.IO and WebSockets for low-latency communication (avg. message retrieval under 120ms).
- Implemented secure authentication (JWT & bcrypt) and persistent storage with MongoDB/Mongoose; tested and deployed to Render with Docker.

AI Travel Planner

Oct 2025 – Nov 2025

- Built an AI-powered travel planning platform recommending destinations, hotels, and attractions based on user preferences, following SDLC best practices from design through deployment.
- Integrated Google Maps API for interactive visualization; implemented a RESTful Express.js backend for AI request orchestration, data persistence, and shareable plan links.

TRAINING

Summer Training – Data Structures and Algorithms with Java

Jul 2024

- Implemented core data structures (linked lists, stacks, queues, trees, graphs) applying OOP principles, with focus on time/space complexity.
- Optimized sorting (QuickSort, MergeSort) and searching (binary/linear search) algorithms; solved 50+ coding challenges.

CERTIFICATIONS

- Programming in Java | Coursera (Aug 2023 – Feb 2024)
- Become a Full Stack Developer | LinkedIn Learning (Nov 2022 – Feb 2023)
- Generative AI with Large Language Models | Coursera / DeepLearning.AI (Apr 2023)

ACHIEVEMENTS

- Solved 550+ LeetCode problems covering dynamic programming, graph algorithms, trees, and binary search.
- Ranked among the top 10% of students (Dean's List) in the Computer Science & Engineering cohort at LPU.
- Deployed production-ready full-stack applications (Food Donation Platform, Real-Time Chat App) to live cloud URLs, managing full testing and deployment cycles.

CO-CURRICULAR ACTIVITIES

Smart India Hackathon (SIH) – 36-Hour Hackathon, LPU

Sep 2023

- Collaborated in a cross-functional team to develop Kerala Scholar, a tech-driven solution for rural education, advancing to Smart India Hackathon 2023.

EDUCATION

B.Tech in Computer Science & Engineering

Since Aug 2022

Lovely Professional University (LPU), Phagwara, Punjab | CGPA: 8.8 / 10.0 | Dean's List — Top 10% of Cohort
